

This tutorial is for those students whose Looker Studio (ex DataStudio) dashboards indicate that there was Data Set Configuration Error instead of charts (screenshot below)

This happens because the BigQuery Sandbox account automatically applies 60 day data expiration. This means that all your tables under your BigQuery project have expired. It can be fixed quite simply, however you will need to re-upload the same tables making sure that they maintain the same naming. In case you forgot how your tables were called or what sources you were using you can check them in your Resources management tab.

Simply press “Edit” button on your dashboard and then proceed to “Resource” tab in the top menu and press on “Manage added data sources”:

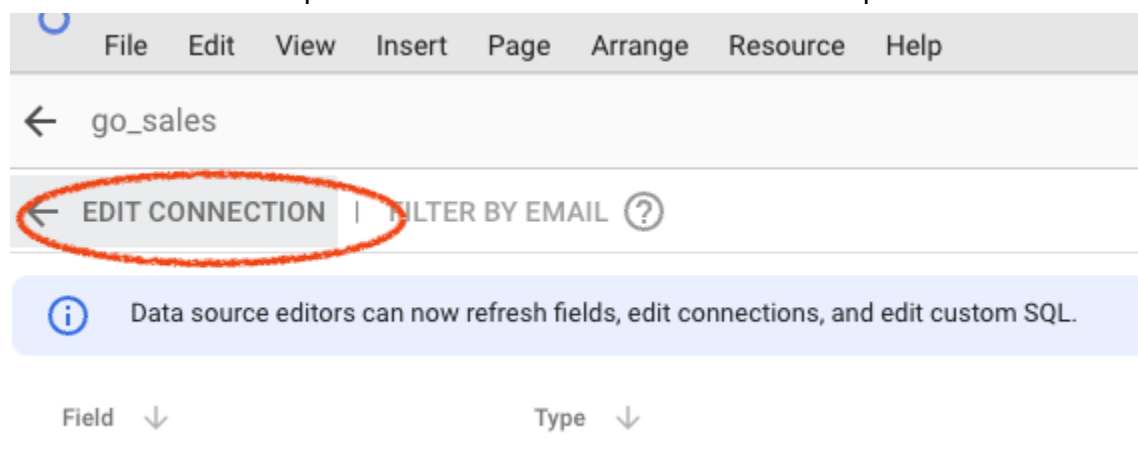

You will end up in the menu which indicates all your data sources:

Data sources					
Name	Connector Type	Type	Used in report	Status	Actions
go_sales	BigQuery	Embedded	17 charts	Working	EDIT DUPLICATE REMOVE
gosales_rfm	BigQuery	Embedded	9 charts	Working	EDIT DUPLICATE REMOVE

Even if you have used “Custom SQL” for your datasources this will still be available and queries are not lost. Press on “Edit” button for your selected data source:

Data sources					
Name	Connector Type	Type	Used in report	Status	Actions
 go_sales	BigQuery	 Embedded	17 charts	Working	 EDIT  DUPLICATE  REMOVE
 gosales_rfm	BigQuery	 Embedded	9 charts	Working	 EDIT  DUPLICATE  REMOVE

Once inside this menu press on “Edit Connection” button on the top left corner:

Inside this menu you will see your query and even the tables which were used, this will allow you to know which tables should be re-imported to your BigQuery project. Once you re-add all the tables the dashboard should fix automatically. Have in mind that if you are still on a Sandbox account, the whole process will need to be redone after 60 days since all tables will expire once again.

To overcome table expiration in 60 days, the only solution is to add a credit card to your account. Once you input billing information you can disable table expiration entirely:

Edit detail

Default table expiry

☐ Enable table expiry 

Default maximum table age

Days

Description

Labels

Labels help organise your datasets and tables (e.g. cost_centre:sales or env:prod). [Learn more](#)

Though have in mind that once you have added credit card details to your account you may be charged for BigQuery usage, though it has pretty high limits, meaning that you may never have to pay for using it. Limits are as follows:

Free usage tier

As part of the [Google Cloud Free Tier](#), BigQuery offers some resources free of charge up to a specific limit. These free usage limits are available during and after the free trial period. If you go over these usage limits and are no longer in the free trial period, you will be charged according to the pricing on this page.

Resource	Monthly free usage limits	Details
Storage	The first 10 GB per month is free.	BigQuery ML models and training data stored in BigQuery are included in the BigQuery storage free tier.
Queries (analysis)	The first 1 TB of query data processed per month is free.	Queries that use BigQuery ML prediction, inspection, and evaluation functions are included in the BigQuery analysis free tier. BigQuery ML queries that contain <code>CREATE MODEL</code> statements are not. BigQuery flat-rate pricing is also available for high-volume customers that prefer a stable, monthly cost.
BigQuery ML <code>CREATE MODEL</code> queries	The first 10 GB of data processed by queries that contain <code>CREATE MODEL</code> statements per month is free.	BigQuery ML <code>CREATE MODEL</code> queries are independent of the BigQuery analysis free tier, and only apply to BigQuery ML built-in models (models that are trained within BigQuery).
BI Engine	Up to 1 GB of free capacity for Looker Studio users.	This free capacity is available to all Looker Studio users, without needing a reservation.

Additionally to be on the safe side you can always input credit card details of your Revolut disposable card, so you won't be accidentally charged.
